Correction to An Unconventional Route to High Efficiency Dye-Sensitized Solar Cells via Embedding Graphitic Thin Films into TiO_2 Nanoparticle Photoanode

Yoon Hee Jang, Xukai Xin, Myunghwan Byun, Yu Jin Jang, Zhiqun Lin,* and Dong Ha Kim*

Nano Lett. **2012**, *12* (1), 479−486. DOI: 10.1021/nl203901m

The power conversion efficiency (PCE, %) was improved from 3.21% for pristine TiO_2 electrode-based cell to 3.71, 4.91, and 5.21% for the cells with carbon/TiO_2 thin layer included at lower, upper, and both sides of TiO_2 films, respectively. However, the enhancement ratio was miscalculated and incorrect information was described. The correct enhancement ratios are 15.6, 52.9, and 62.3% for the cells employing carbon/TiO_2 thin layer at lower, upper, and both sides of TiO_2 films, respectively.

The following corrections should be considered accordingly.

(1) In the abstract, line 10: "... an increase of 40.6% in overall ..." should be corrected to " ... 62.3% ...".

(2) On page 482, line 13: "... which are an increase up to 40.6% from pure ..." should be corrected to " ... 62.3% ...".

(3) On page 483, line 47: "... were relatively increased up to 28.9 and 38.2% ...' should be corrected to "... 15.6% ..... 52.9%...".
