

Correction to Phototriggered Base Proliferation: A Highly Efficient Domino Reaction for Creating Functionally Photo-Screened Materials

Minghui He, Xun Huang, Zhaohua Zeng, and Jianwen Yang*

Macromolecules **2013**, *46* (16), 6402–6407. DOI: 10.1021/ma400983t

Page 6405. The mechanism of phototriggered self-propagating polymerization contains frontal polymerization (FP). In the second paragraph of section 3b, the literature below should be cited in the sentence “Undoubtedly, frontal polymerization (FP), a mode of converting monomer into polymer via a localized reaction zone that propagates, has played a crucial role in this polymerization process.”
