

Additions and Corrections

On Numerical Classification of Solution Adsorption Isotherms

Marcellus T. Coltharp* *Langmuir* **2005**, *21*, 3475-3479.

Page 3479. In Table 4, system C4, the active carbon system, the DS_{mc} , -33.0% , is not correct. The correct value is -39.1% . To maintain the descending order, systems C4 and C5 must be interchanged and their designations corrected to the new order. Consequently, in the related text discussion on page 3478 the phrasing “a more porous carbon, active carbon, that likely has more surface oxygen functionalities” must also be interchanged with “a surface in which hexagon sheet edges have lost their oxygen functionalities during high-temperature treatment.”
