

Additions and Corrections

Correction to “Acceleration of Laser-Induced Formation of Gold Nanoparticles in a Poly(vinyl alcohol) Film”

Masanori Sakamoto, Takashi Tachikawa, Mamoru Fujitsuka, and Tetsuro Majima* *Langmuir* **2006**, 22, 6361–6366.

There were calculation errors in the estimation of concentration of additives (i.e., benzophenone, AuCl_4^- , and 2-mercaptoethanesulfonate) in the PVA film. Correct concentration values of the additives in the PVA film were 100 times smaller than those in the original version of manuscript. Correct k_{ELT} and k_{q} values were 100 times larger than those in the original version of manuscript. The conclusions of the paper are unaffected by the correction. The values in Table 1 should be changed. The correct version is shown in below.

Table 1. Electron-Transfer Rate Constants (k_{ELT}) in the Dried and Formic Acid-Doped Films (degrees of doping = 10 ± 2 wt %) Containing BP (0.21 M) and Several Concentrations of AuCl_4^-

$[\text{AuCl}_4^-]$ ($\times 10^{-2}$ M)	k_{ELT} ($\text{M}^{-1}\text{s}^{-1}$)	
	dried film	formic acid doped film
1.25	400 ± 100	1200 ± 700
2.5	2400 ± 1900	1300 ± 300
3.75	7100 ± 5500	8900 ± 4000
