Synthesis and Isolation of the Molecule-like Cluster
 $\text{Au}_{38}(\text{PhCH}_2\text{CH}_2\text{S})_{24}$

Robert L. Donkers, Dongil Lee, and Royce W. Murray*
Langmuir **2004**, *20*, 1945–1952.

Nanoparticles prepared in a similar manner and having the same electrochemical signature have been shown, by high resolution mass spectrometry analysis,^{1,2} to have the formula $\text{Au}_{25}(\text{PhCH}_2\text{CH}_2\text{S})_{18}$. This was further confirmed by single crystal structure determination.³ The native Au_{25} nanoparticle has a 1− charge, and its counterion (from the synthesis) is tetraoctylammonium. We conclude that the nanoparticles prepared in this paper and labeled with the formula cited above, were *instead* mostly Au_{25} .
