

Influence of Surfactant Concentration and Background Salt on Forced Dynamic Wetting and Dewetting [*Langmuir* 2011, 27, 2112–2117 DOI: 10.1021/la104675t]. Daniela Fell, Günter Auernhammer,* Elmar Bonaccorso, Chuanjun Liu, Rudi Sokuler, and Hans-Jürgen Butt

As Terence Blake correctly pointed out, the parameters reported for the fit with the kinetic theory in eq 1 are wrong by a factor of $(2)^{1/2}$. The K_0 values should all be a factor of $(2)^{1/2}$ lower, and λ should be a factor of $(2)^{1/2}$ larger than reported.
